TECHNICAL PARAMETER:			
Series	Details	Parameter	
Material	Raw material	Steel	
	Material thickness	0.4-0.6 mm	
Decoiler	Structure	Manual passive type	
		Single head type	
	Loading capacity	1.5 Tons	
	Coil inner diameter	450-550 mm	
	Guiding device	Placed on the machine by seller	
	Rolling shaft material	45# STEEL	
	Shaft diameter	40 mm	
	Roller material	GB-Cr12	
	Rolling station	11 stations	
	Work speed	25 m/min	
	Machine structure	Vertical memorial arch frame	
Roll forming	Machine basic frame	Steel plate welded	
machine	Bearing	Roller bearing	
	Work power	3 kw	
	Transmission	By gear	
	Safety cover	available	
	Appearance	Good appearance with no burrs in steel	
		body nor traces of rust or defects in	
		painting. Good electrical and hydraulic	
		cable organization. Car painting make the	
		machine more glossy	
	We will use 11 stations with shaft diameter of 40 mm to form this profile. The		
	driving motor power is 3 kw to support the roll forming system. The vertical memorial arch frame structure is fixed on the basic frame by bolts; it's vertical strong and powerful. The working speed can be 25 m/min; the productivity in

steady working condition can match the demand of the project. We will put the counter on the main roll forming machine to count the running length, and transmit the data to control system.

The roll forming system

The roll forming system

Frequency brand Delta from Taiwan PLC brand Delta from Taiwan Touch screen Screen type Screen language English/Chinese/Arabic/French As requested Cut command Yes Profile length set-up Yes Batch quantity Yes program

Control system

We adapt the PLC for the control system; it will be so much helpful for users to handle the machine. The control system will be in charge of the working condition like the speed, cutting length, H hole punching and cutting quantity. As we have the counter on the roll forming machine, and the travel switch on the cutting head, so it's easy to control the cutting length and cutting quantity. The display screen will be the touch screen or the text screen; the language can be English, or as required.

	What we do is just set up the data on the screen like the cutting length,			
	quantity, then the machine will work automatically, when reach the			
	required quantity, the machine will stop by itself. It's so safely and save			
	material.			
	Work type	Hydraulic		
	Driving method	By Cylinder		
	Motor power	3 kw		
	Cutter material	GB-Cr12	Good quality	
			material	
	Cutting length	±0.5 mm/3m		
	tolerance			
	Oil pump	Solenoid valves:1 set	With cooling	
			system	
Hydraulic system	Cutting feature	Automatic cutting after	Steady and	
		forming, no distorting or	safety, no have	
		wasting.	sounds by this	
			cutting way	
	The hydraulic cutting system will be installed on the main roll forming			
	machine by seller. The hydraulic system is by cylinder driving, make the			
	cutting working condition steadier. Meanwhile, there are two pieces of			
	travel switches on the cutting system, it will make the record when the			
	cutter up and down, and transmit the data to control system. The cutter			
material is Cr12, it's especially using for the			erial.	
	The seller should a	rrange the machine test in sel	ange the machine test in sell's factory before	
Inspection	shipment.			
	The buyer should provide material coil to seller.			
	The machine can work automatically with PLC control, automatic			
Feature	cutting to length and machine can stop when achieved the order			
	quantity. So that it co	an improve the safety level and so	ave material.	
Machine weight	1.9 Tons
