

Hypertherm®

SmartSYNC handheld torch 75 degree 15.2m (50') lead

Part number: #059727 (SmartSYNC TORCHES)

With simple, twist-on consumable installation, and convenient power and amperage adjustment controls on handheld models, SmartSYNC® torches for Hypertherm's new Powermax65/85/105 SYNC® plasma systems allow the operator to change consumables and applications without returning to the power supply. This reduces consumable change time to about 10 seconds and automatically sets the system for the cartridge, minimizing downtime, troubleshooting, waste and training time.

For handheld cutting and gouging jobs

The time-saving SmartSYNC torch controls allow the operator to adjust the amperage on the fly and change consumables and applications without returning to the power supply. SmartSYNC 75° and 15° hand torches are well-suited for a variety of applications such as

gouging, fine feature cutting, extended reach cutting, and flush cutting. The ergonomic design of the 75° torch is perfect for normal cutting, while the 15° torch directs heat away from the operator during heavy gouging and enables cutting overhead or in hard-to-reach areas.
